

MUHAMMAD SUBHAN

Software Engineer | Full-Stack Developer | AI Integration

+92 324 5969400 • wsubhan5969@gmail.com • Daska Road, Sialkot, Punjab 51310, Pakistan • GitHub: github.com/subhanmiaan

PROFESSIONAL SUMMARY

BS Computer Science student with hands-on experience shipping full-stack, AI-integrated web applications end to end. Comfortable across the stack — Next.js/React front ends, database-backed architectures, and LLM/API integration — with a track record of taking a project from idea to a working, deployed product on a zero-budget, free-tier stack. Actively applies Generative AI and prompt engineering to accelerate the software development lifecycle without cutting corners on quality.

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, C, SQL

Web & Frameworks: Next.js (App Router), React, Tailwind CSS, Streamlit

Backend & Data: Node.js, Supabase (PostgreSQL), REST APIs, Ollama (local LLM inference)

AI / LLM Tooling: Prompt Engineering, Prompt Patterns, multi-model orchestration (Gemini, Groq/Llama, OpenRouter)

Core CS: OOP, Data Structures, Database Systems, Digital Logic Design, Linux system calls, GCC/C

Tools: Git & GitHub, Vercel, VS Code, Linux CLI

PROJECTS

AI Consensus Hub (DebateAI) | *Personal Project*

2025

- Architected a **Next.js 14 + TypeScript** web app where multiple AI models (Gemini, Groq/Llama, OpenRouter free-tier models, and a search-grounded agent) independently draft, cross-critique, and converge on a synthesized "consensus" answer to a user prompt.
- Designed a **3-stage debate pipeline** — parallel draft generation, cross-critique/convergence, and a judge/synthesis phase — surfacing agreed points, disagreed points, and a confidence score for the final answer.
- Built the entire product on a **strict \$0 budget**, combining free-tier LLM APIs with Supabase for caching and Vercel Hobby for deployment, with no credit card requirement anywhere in the stack.
- Implemented a live UI with a phase stepper, a debate-intensity toggle (fast single-round vs. deep multi-round), and a tabbed "debate arena" view for inspecting each model's reasoning.

Pay'In Ijaz (Desi Ustad AI) | *University Project*

2025

- Built a **100% offline, local AI chatbot** using Streamlit for the interface and Ollama running a sub-500MB quantized model (qwen2.5:0.5b) — no cloud API keys, no internet dependency.
- Engineered a detailed persona system prompt to give the bot a consistent, culturally-grounded character voice, demonstrating strong prompt-engineering and persona-design skills.
- Delivered a complete, submission-ready package: chat UI with custom CSS and avatars, sidebar chat-reset, robust Ollama connection-error handling, requirements.txt, .gitignore, and an academic README for GitHub.

EDUCATION

BS Computer Science | *University of Sialkot, Faculty of Computing and IT*

In Progress | Sialkot, Pakistan

- Relevant coursework: Object-Oriented Programming, Data Structures, Database Systems, Digital Logic Design, Operating Systems, Human-Computer Interaction, Android Mobile Application Development.
- Applied classroom theory to real-world full-stack web projects and complex database architectures.

CERTIFICATIONS

Prompt Engineering — Coursera

Dec 2023 – Jan 2024

- Certified in advanced prompt engineering using structured Prompt Patterns to automate problem-solving and development workflows.

ADDITIONAL EXPERIENCE

Founder / CEO | *PixelVerse (Social Media & Design Agency)*

Sept 2024 – Present | Sialkot

- Run the technical and creative operations of a small digital agency, applying automation and AI-assisted workflows to cut delivery timelines from days to hours.
